

DW and DM List of Labs

Lab 1: Install Python 3 (Anaconda) for lab preparation.

Lab 2: Demonstrate the concept of data preprocessing and cleaning using Python libraries.

Lab 3: Write a program to implement the Apriori algorithm and generate association rules.

Lab 4: Write a program to implement the FP-Growth algorithm.

Lab 5: Write a program to demonstrate classification using the ID3 algorithm.

Lab 6: Write a program to demonstrate classification using the Bayesian algorithm.

Lab 7: Write a program to demonstrate classification using the SVM algorithm.

Lab 8: Write a program to implement the Linear Regression algorithm.

Lab 9: Write a program to implement the Multiple Linear Regression algorithm.

Lab 10: Write a program to demonstrate clustering using the K-Means algorithm.

Lab 11: Write a program to demonstrate clustering using the K-Medoids algorithm.

Lab 12: Write a program to demonstrate clustering using the Mini-Batch K-Means algorithm.

Lab 13: Write a program to demonstrate clustering using the Agglomerative algorithm.

Lab 14: Write a program to demonstrate clustering using the DBSCAN algorithm.
